VALUATION APPROACHES AND METHODOLOGIES

For the purpose of valuation, Market Approach – Market Price method

Under the Market Price method, the market price of an equity share as quoted on a recognized Stock Exchange is normally considered as the value of the Convertible Warrants of that company, where such quotations are arising from the shares being regularly and frequently traded. Generally, market value is reflective of the investors' perception about the actual worth of the company. However, in certain situations, the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share especially where the market values are fluctuating in a volatile capital market.

Regulations 164(5) – Frequently Traded Shares

“Frequently Traded Shares” means the shares of the issuer, in which the traded turnover on any recognised stock exchange during the 240 trading days preceding the relevant date, is at least ten per cent of the total number of shares of such class of shares of the issuer: Provided that where the share capital of a particular class of shares of the issuer is not identical throughout such period, the weighted average number of total shares of such class of the issuer shall represent the total number of shares.
